DATIA Collection Site

Dear Customers,

We are pleased to announce our new Saliva Split Collector™.

This patent pending device will improve the saliva (oral fluid) collection procedure while greatly reducing some of the issues with the current collecting method and device.

Benefits of the new Saliva Split Collector Device:

1. Removes “Fatal Flaws” due to inadequate sample volume collected resulting in:
 - a. No more charges for Fatal Flaws due to inadequate sample volume.
 - b. Reduces repeat collections saving time and money.
2. Improves drug recovery and expands the window of detection.
3. Automatically collects a split sample enhancing the Chain of Custody’s legal defensibility.
4. No more gloves required for the Donor.
5. No more direct contact with the cotton swab or saliva.
6. Eliminates the Donor’s ability to prevent saliva collection.

Our goal is launch delivery of the new collector during the month of February to all of our customers. By the end of the quarter continuing into April the transition should be completed and Sciteck will not be accepting any of the old collectors for screening.

The new Split Collector will come pre-packaged with everything you will need to perform the collection. The procedure is attached and a link will be provided on our web-site at www.sciteck.org for collection instructions and further details.

At Sciteck, we maintain a proactive approach by addressing our customer’s needs, improving technology and striving to provide the best customer service in the industry. This new device will save time and money while dramatically improving the legal defensibility your drug testing program.

If you have any questions please do not hesitate to contact us.
